

DIAGNOSTIC METHOD AND ARTICLE FOR IDENTIFYING SIGNIFICANT EVENTS

ABSTRACT OF THE DISCLOSURE

5 Backtraces are logged in the log file during execution of a program and tagged with information that can categorize the backtraces. Certain tags are also marked as “interesting” in the log file. A report is generated from the log file, indicating which of the backtraces are associated with the tags marked as interesting. In one embodiment, allocations of objects are logged with their addresses, and the objects that are later
10 migrated into session memory are marked interesting.
